

Benjamin Herbage is the Scientific Director of SYMATESE. He has a background in organic chemistry, with a special interest in biopolymer science. He has been managing Symatase innovative medical devices design for already 18 years. He has managed the orientation of SYMATESE Research and Development to focus on skin, with the development of innovative solution in wound healing and anti ageing medicine. Among biopolymers, Benjamin Herbage has a key focus on Hyaluronic acid transformation especially for the design of crosslinked Hyaluronic acid Filler.
