

Having accrued more than two decades of inimitable expertise in the field of plastic surgery, Dr. Sebastien Garson has garnered a laudable reputation for his work in private practice in Senlis, France, since 2005. Focusing on the areas of aesthetic and reconstructive surgery, particularly regarding the face, breasts and abdomen, he previously worked as an associate with the Morphology and Cognitive Laboratory of Lyon, France, in 2002. Well-versed in anti-aging and regenerative medicine, Dr. Garson has contributed his services to public hospitals, as well as in private settings. In addition to his practice in Senlis, he also offers consultations in Paris.

Prior to embarking upon his professional journey, Dr. Garson pursued a formal education at a medical school based in Amiens, France, where he attained a Doctor of Medicine in 2001, and was further licensed as a plastic surgeon from the same institution in 2004. He also earned a university diploma in plastic and aesthetic surgery of the face from the Grenoble University Hospital Centre. During the course of his academic efforts, he received training from Professor Bernard Devauchelle, a French oral and maxillofacial surgeon who successfully completed the world's first face transplant in 2005, as well as Dr. Bernard Cornette de Saint Cyr Bernard, who is a cosmetic and breast surgeon of considerable renown and Dr Emmanuel Delay as assistant at the Leon Berard Cancer Center in Lyon. Eminently qualified in his field, Dr. Garson is also a licensed plastic surgeon through the European Board of Plastic Reconstructive and Aesthetic Surgery and the French Board of Plastic Reconstructive and Aesthetic Surgery.

Dr. Garson first became involved in his profession because of his natural tendency towards plastic surgery during his initial medical training. Moreover, he made skillful use of his professional network to reach his current position, and seized opportunities as they arose. Dedicated to conducting his practice with only the highest ethical fortitude, he has notably written a variety of articles for several professional journals. Likewise, Dr. Garson's research in 3D surface imaging has contributed to many positive advances in the medical field. In 2009, he has been honoured by the Aesthetic Surgery Journal of the Award for the best international paper with : "Fat Injection to the Breast: Technique, Results, and Indications Based on 880 Procedures Over 10 Years »

Well regarded for his many contributions to his area of practice, Dr. Garson has received numerous accolades throughout the course of his career. In 2001, he was bestowed with a Gold Medal from Amiens University Hospital, which is one of the largest such institutions in France and boasts a bed capacity of 1,200. During his work at the hospital, Dr. Garson earned distinction as the chief of clinic.

To remain aware of developments affecting the field, Dr. Garson has maintained his membership with a number of pertinent organizations. He is the president of Plastirisq, which is an officially accredited organization that aims to identify risky practices and arrange quality procedures in reconstructive and aesthetic plastic surgery. He is also a past president of the French Society of Plastic, and Aesthetic Surgery (SOFCEP) and the past president of the National Union of Plastic, Reconstructive and Aesthetic Surgery (SNCPRE). Additional memberships to his credit include the French College of Plastic, Reconstructive and Aesthetic Surgery and the American Society of Plastic Surgeons. Dr. Garson is also a member of the American Society of Plastic Surgery ASPS and the International Society of Aesthetic and Plastic Surgery ISAPS.

Since 2018, Dr Garson is the surgical course coordinator of IMCAS the International Master Course on Aging Science one of world biggest actor in medical conference dedicate to aesthetic.
