

Marius Khan is a co-founder and CEO at avisé labs GmbH, a German medical technology startup focusing on improving therapies and diagnostics in medicine. Together with Khans co-founder, the worldwide leader in skin testing equipment Courage + Khazaka, avisé applies artificial intelligence technologies on patient data with the goal to predict individually the efficiency of possible therapies in dermatology and aesthetic medicine for patients.

Khan holds a Bachelor and a Master of Science degree in computer science. During his previous work in science and research, he focused on the field of machine learning and on server-sided software engineering and gained experience in project management within numerous IT projects.

Until 2018 he shared his experiences as a lecturer at the Department of Computer Science at the Dortmund University of Applied Sciences, Germany, and taught in the field of software engineering.
