

Bio Benjamin Herbage

Benjamin Herbage is the Scientific Director of SYMATESE. He has a background in organic chemistry, with a special interest in biopolymer science. He has been managing Symatese innovative medical devices design for already 24 years. He has managed the orientation of SYMATESE Research and Development to focus on skin, with the development of innovative solution in wound healing and anti-ageing medicine. He has led the development of the OBT technology / EMERVEL range, and is now leading the design of a new range of HA fillers based on an innovating crosslinking technology.
